FRANKLIN
TENNESSEE

Basic Procedure (Meadowgreen Sewer Area) for installing a Grinder Pump System (Residential)

- ☐ The make/model/type of pump has to be an approved type. Currently, there is one type of pump by E-One Sewer Systems that is approved: the DH071. This is sold by WASCON in Livingston, TN. An interior alarm kit is required.
- ☐ Pay the connection fees at Franklin City Hall Utility Billing. Notify the Utility Billing Department that a grinder pump is to be installed and sign a sewer service agreement and a pressurized sewer agreement.
- ☐ Obtain a Plumbing permit from City of Franklin Building and Neighborhood Services. Bring a plot plan with the installation location of the grinder pump marked. The pump location will need to be sited so that any odors from the grinder pump will not be a nuisance to adjacent properties, or to the primary structure.
- ☐ The State Electrical permit should be obtained at the County Admin. Complex on West Main St. Complete all electrical inspections and corrections before calling for Plumbing inspections from the City.
- ☐ Call for a Plumbing inspection (Sewer line) before covering the pump and sewer lines.
- ☐ For existing houses with septic systems, the septic tank will have to be abandoned per County Sewage Disposal Management guidelines. Obtain a 'Technical Assistance' permit and call for an inspection to witness the abandonment.
- ☐ Point of contact at City of Franklin: Chris Bridgewater 550-6633 or chris.bridgewater@franklinton.gov.
